

PRESS RELEASE 17.06.2026

Stockert Receives the Jobmotor Award 2026

Award Recognizes Sustainable Growth, Innovation, and Investment in People

Stockert GmbH has been named one of the recipients of the **Jobmotor Award 2026**. Presented by *Badische Zeitung*, the Chambers of Industry and Commerce of Southern Upper Rhine and Hochrhein-Bodensee, the Freiburg Chamber of Crafts, and the Baden Industrial Association (wvib), this prestigious business award honors companies that stand out through the creation and preservation of jobs as well as innovative approaches to attracting and developing employees.

For Stockert, this award represents special recognition of the company's long-term strategy. For 40 years, the Freiburg-based medical technology company has been developing and manufacturing innovative technologies for cardiac care while combining economic success with long-term investments in people, knowledge, and innovation.

The award recognizes companies that make a significant contribution to the economic development of the region through sustainable growth, innovative strength, and the creation of highly qualified jobs.

"The Jobmotor Award 2026 is a recognition of our entire team. Our success is built on the people whose dedication, expertise, and innovative spirit contribute every day to developing life-saving medical technology and driving our company forward," says Christoph Gerber, CEO of Stockert GmbH.

Over the past several years, Stockert has continuously strengthened its position as an innovative employer. Between January 2025 and January 2026 alone, the company hired 19 new employees, including five students. At the same time, Stockert remains committed to long-term career opportunities: more than 90 percent of its workforce is employed on permanent contracts.

Supporting young talent is another key priority. Through close partnerships with the University of Freiburg, Offenburg University of Applied Sciences, and the Karlsruhe Institute of Technology (KIT), Stockert supports students early in their professional careers and creates attractive opportunities for entering the medical technology industry.

In addition, the company continues to invest heavily in research and development. More than half of its total budget is dedicated to innovation projects and future technologies. These investments not only strengthen Stockert's competitiveness but also create sustainable, high-quality jobs at its Freiburg headquarters.

Receiving the Jobmotor Award 2026 confirms the company's strategic direction while serving as motivation to continue shaping Stockert's future together with its employees.

About Stockert

Stockert is one of the world's leading providers of high-frequency ablation systems for the treatment of cardiac arrhythmias. The company covers the entire value chain – from research and development, regulatory approval, and production to logistics and service. Several thousand Stockert systems are in use worldwide across 120 countries, distributed through internationally operating medical technology companies.

The Freiburg site continues to develop very positively: over the past twelve months, new jobs have been created and additional customers acquired. Stockert invests around 40% of its resources in the research and development of new technologies and therapies in order to continue bringing innovative solutions to the market in collaboration with partner companies.
